

## NEW IDEAS:

### Augmented Reality Business Card

- After scanning the QR code in the business Card, it will redirect it to our web which will run the augmentation after scanning the card itself.
- You can create a model using Three.js that will work smoothly on website.

## Character Tracking ( using mediapipe and Unity )

- This can be used to track hands, face or full body to move the 3D Character creating a virtual Character with real motion movement.
- This include only camera, unity and mediapipe to function
